Education

University of Michigan – Ann Arbor

Bachelor of Science in Computer Science

Professional Experience

Azimuth Industrial Co.

June 2026 - Present

Software Developer

Bay Area, USA

- Engineered an RFQ workflow automation platform with Python, Flask, FileMaker, and Microsoft 365 integrations for 10+ users, processing 20–25 RFQs/month and saving ~8 hours/week in manual tracking.
- Developed a cross-company scheduling and ledger platform with Python, React, TypeScript, and Microsoft 365 integrations, reducing multi-hour meeting coordination and manual credit tracking to ~10-minute workflows.
- Implemented a CMMC-compliant, on-premise AI knowledge platform with Python, PostgreSQL, Docker, and local LLMs, centralizing fragmented enterprise data and reducing knowledge retrieval from 15–30 minutes to <2 minutes.

Tarmac.IO Company

May 2024 - Present

Software Developer

Remote, USA

- Investigated and resolved 100+ production issues across backend APIs, databases, and frontend clients by analyzing logs, API responses, and system telemetry, improving platform reliability and reducing repeat incidents by ~20%.
- Debugged and fixed backend failures across Rails services and PostgreSQL data pipelines, ensuring correct API behavior, data integrity, and successful processing of 50,000+ energy certificate records.
- Built and optimized backend data ingestion pipelines for CSV and PDF processing, reducing manual data entry by 85% and improving system throughput and operational efficiency.

Zyro Company

July 2025 – Feb 2026

Founding Engineer

New York City, USA

- Prototyped AI-powered onboarding and activation flows in collaboration with Product and Design used in demos and internal strategy discussions around go-to-market direction, improving performance 25–35% based on internal testing and feedback.
- Built and iterated on AI-powered onboarding and activation workflows, improving perceived product value and reducing user friction during early user interactions, enhancing demo readiness and perceived activation by ~40%.
- Integrated frontend experiences with FastAPI and Node.js services to support live data flows in demo and internal testing environments, reducing API latency by ~35% during iteration.
- Debugged backend API and integration issues across FastAPI and Node.js services using logs and telemetry, improving system reliability and iteration speed.

MiTék Company

Dec 2023 – May 2024

Systems Integration Researcher

Ann Arbor, MI

- Coordinated integration across ML models, embedded systems, and validation workflows, reducing integration and debug time by 30%.
- Built and evaluated computer vision pipelines (Detectron2, Python, C++), improving anomaly detection accuracy by 25%.

Project Experience

AI Whale Tracker - Real-Time Signal Intelligence System

- Built a real-time AI signal processing system using Python, FastAPI, MongoDB, and OpenAI APIs, ingesting 1,000+ events per fetch cycle.
- Normalized and aggregated raw event data into entity-level records (~200 per cycle) suitable for prioritization and alerting.
- Used LLM-based summarization and ranking to suppress 70–80% low-value signals, improving focus on high-intent entities.
- Implemented 30s / 60s polling, alerting, and an AI chat interface to query live signals in natural language.

TraumaLink - Real-Time EMS-to-Hospital Handoff Platform

Feb 2025 – May 2025

- Built a real-time EMS-to-hospital trauma handoff platform using Next.js, TypeScript, Medplum FHIR, WebSockets, and Deepgram Voice AI, streaming structured patient data from paramedics to hospital teams.
- Designed multi-patient, bidirectional workflows for case acceptance, missing-information requests, clinical task creation, and live status updates using FHIR resources and WebSocket subscriptions.

Skills

- Languages & Frameworks:** Python · TypeScript · JavaScript · SQL · C++ · Ruby · React · Flask · Ruby on Rails
- Backend, Data & Integration:** REST APIs · Microsoft 365 Integration · PostgreSQL · MongoDB · Spark · BigQuery
- AI, Cloud & DevOps:** Local LLMs · LangGraph · TensorFlow · spaCy · Docker · AWS · GitHub Actions · Jenkins · Azure DevOps · CI/CD
